

S-TEAM LAB

Activity fields:

S-TEAM Lab was founded in 1990 as a spinoff company of the Slovak University of Technology at Bratislava. Its main product range and activities have included:

- *HOMER* series of high power impedance analyzers and automatic impedance matching systems operating with CW and pulsed magnetron signals in 900-MHz, 2.45-GHz, and 5.8-GHz ISM bands
- Diode detectors, directional and bidirectional couplers, detectors and power meters for industrial applications in the same bands
- Consulting; design, development and manufacture of customized industrial microwave components, automated systems and applicators of all kinds, including plasma.
